

## Not Completed

- When you filter the products in the customer frame, if you add products after the filter is applied, you're able to add duplicate entries into the basket. This error doesn't happen if you select "None" on the 'Brand' filter option.
- I cannot apply two combo box filters to my products JTable in my customer frame at the same time. The filter options only work individually. E.g. I cannot select a UK, Logitech branded keyboard.
- I assumed 'save for later' means that because the customer technically hasn't paid for a product, the products are still available to purchase. This means that save for later doesn't decrement the current quantity in stock value.
